

**Genius iQ. Two measuring devices in one.
Today's modern color management.**

The Art of Refinishing.

Next Generation: Genius iQ perfectly putting color and effect in the spotlight.

The way to the right color is now even faster and more accurate: the Genius iQ revolutionises the tried and tested system of electronic color measurement. Not only reliably measuring colors directly on the vehicle body – even effects are no problem for this handy color expert.

The digital color measurement in pace with the times: With the new Genius iQ, Standox is making the search for the right color faster and more accurate.

Identify all relevant color information and more, directly on site: the Genius iQ not only reliably identifies shades and nuances, the handy 3-angle-measuring device also precisely determines effects.

As with the Genius the measurement is taken directly from the vehicle body, close to the damaged area. Genius iQ stores the measured data, which can then be converted directly into ready-mixed formulas on the PC with Standwin software: more than half a million formulas in different qualities are stored here and are therefore very easy to identify.

System Genius.

- Transport case
- Genius calibration standards
- Batteries
- Storage box for the bodyshop
- CD manual
- USB cable

Pretty effective: Genius iQ.

Find the right color conveniently and reliably with the Genius iQ: an intuitive and user-friendly menu system that is available in several languages, is simple and easy to use. In combination with the Standwin software finding the right color is “child’s play”.

Effect is in: today, car colors are mainly effect colors, a trend that is on the increase. And this is where the new Genius iQ is really impressive: the compact color expert not only measures classical color information with high accuracy and reliability but it also simultaneously identifies the effects, rare or varied colors and determines the appropriate mixing

formulas. You have a good grip on color and effect with the handy Genius iQ. Which is also a benefit for your customers: Genius iQ – simply effective.

Reliable measurement.

Optimal positioning for reliable measurements on a flat surface through 4 “contact pins”. An additional rubber ring prevents the incidence of extraneous light for the best possible measurement result.

Internal memory.

Efficient color search: the car brand can be pre-selected directly via touch screen on the device and stored in the Genius iQ internal memory in addition to the measurement data.

User-friendly operation.

Operation via touch screen with stylus or setting wheel. Easy to use supported by an intuitive graphical user interface.

System requirements.

Minimum: PC with 1.6 GHz, 1GB RAM, 4 GB free space on hard disc, DVD drive, mouse, 2 free serial ports, Windows XP, Windows 7

Recommended: PC with 1.6 GHz, 2GB RAM, 8 GB free space on hard disc, DVD drive, mouse, 2 free serial ports, Windows XP, Windows 7
