**The Art of Refinishing.**

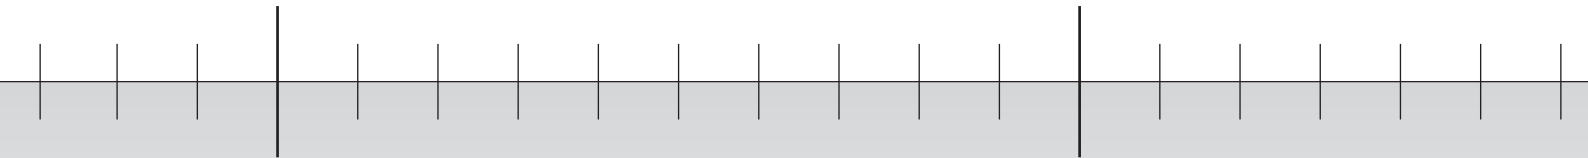

## The evolution of efficiency.

**At the 1992 Automechanika trade fair we unveiled a new refinishing technique based on the success we had achieved with our Standofix 2K Compactlack. Since then this technique has continued to help Standox refinishers to reduce their work time considerably by enabling them to carry out refinishing in a single operation.**

This technique is as pioneering now as it was then. Over the years we have developed new products to enhance the technique and today we provide unique know-how along with this refinishing process.

### Standohyd Basecoat.

Stadox is a pioneer of waterbased refinishing systems for vehicle repair. When Standohyd was launched, refinishers were provided with a complete refinishing system that required just 1.5 spray passes.

- A refinishing system for all refinishing work.
- High coverage and very economical.
- VOC-conform and environmentally friendly.

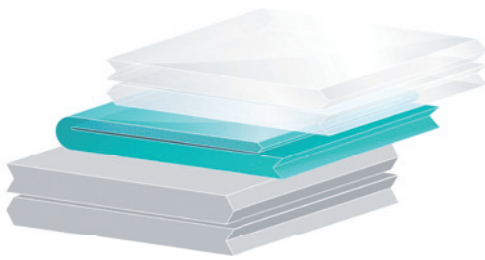

### Standocryl 2K Clearcoat 20-60.

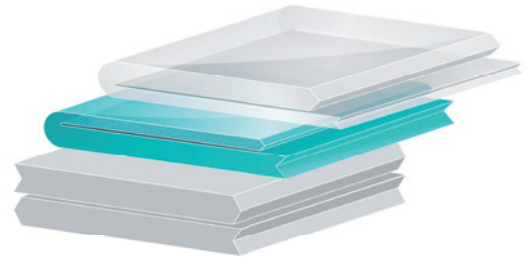

Application in a single operation was revolutionised in 1994 when Standocryl 2K Clearcoat 20-60 was launched. From then on the following applied:

- No more flash-off time during the application of clears and basecoats.
- High shine and perfect stability.
- Ease of use and high efficiency.

### 2K HS Clearcoat.

Standex HS systems were always ahead of their time. Long before VOC legislation, we were focussing on environmentally-friendly topcoats and clearcoats as well as on economy and quality.

- High stability.
- Brilliant shine and perfect gloss and flow.
- Good polishing properties.
- Easy to use.

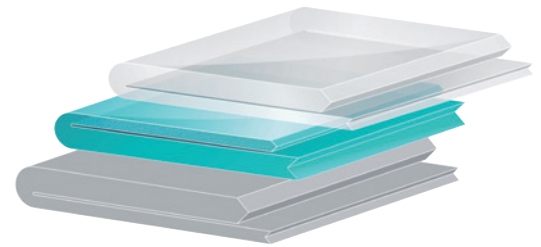

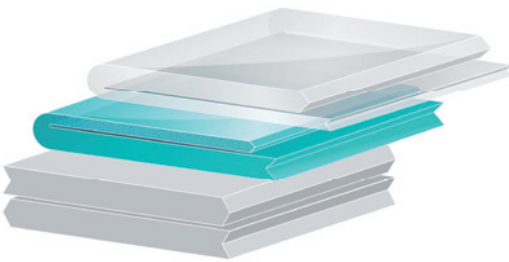

### VOC Nonstop Primer Filler.

As a wet-on-wet filler it is ideally suited for use with Standohyd Basecoat requiring a flash-off of 15-20 minutes before further processing.

- Wet-on-Wet application.
- Excellent gloss hold out.
- Application is a single operation with new spare parts.
- Approved by leading OEMs.

### Down time is lost time.

At Standox we have been making our refinishing systems and application techniques more efficient and user-friendly for decades, however, the competition continues to use conventional methods which require flash-off times between each spray pass.

With these methods, many bodyshops experience delays in spray booth application due to longer processing times as well as unnecessarily high material consumption.

Our motto: Efficiency without time loss.

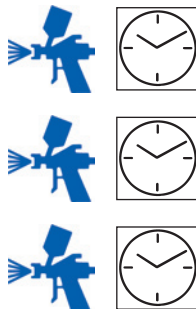

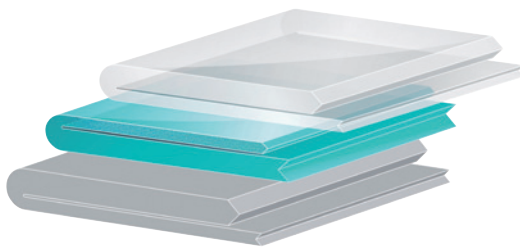

### VOC Express Clearcoat.

The new Standox VOC Express Clearcoat yields perfect results even under difficult processing and drying conditions, offering not only reliable results but also being very economical.

In every situation, our latest refinishing technology remains true to its excellent properties – regardless of the working environment or the indoor temperature.

- Application in one visit.
- Wide application range.
- Optimal gloss and perfect finish.
- Highly efficient and economical.
