Standovision Training Video - Tinted Clearcoats

As shown on the Axalta Global Automotive Colour Popularity Report, highly chromatic reds and in particular blue colours are becoming more and more popular. These very intense and vivid effect shades are setting a new trend in European car parcs. Standox developed a dedicated repair process to match the colour position and the strong deep effect of these highly brilliant colour shades using a tinted clear coat solution. If you want to find out more and want to know, how to repair these colours right first time, please tune in our latest Standovision Video "Special finishes - Refinishing process for tinted clears".
