Standex details the repair process for tinted clearcoats in its latest video

Standex, a global refinish brand of Axalta, has a new Standovision training video. *Special colours - repair process for tinted clearcoats* explains in detail how these can be professionally repaired using a special Standox process.

25 March 2021 - Highly chromatic red and blue tones are increasingly popular with drivers because of their depth and brilliance. Repairing these intense and lively effect shades can be a challenge for refinishers. In the latest Standovision training video, the Axalta paint experts guide professional refinishers through the entire repair process, step by step, and explain how a right-first-time result can be achieved.

"Standex stands for the Art of Refinishing and for repair processes that make invisible refinishing possible," says Harald Klöckner, Axalta International Training Leader and Refinish Product Specialist. "Standex has developed a special repair process for the repair of vehicles with effect colours where tinted clearcoats are used. Thanks to this special process, the intense and lively effect shades can be precisely reproduced. The tinted clearcoat brings out the intense and deep colour tones that are a prerequisite for an invisible repair. The challenges these special colours pose and the way in which they can be mastered is clearly demonstrated in the video."

In the Standovision training video series, Axalta experts impart their know-how and give professional refinishers tips on the correct and efficient use of Standox products. The latest training video is available on the Standox YouTube channel at www.youtube.com/standoxonline. Further information on the Standovision videos is available on the Standox website at www.standex.com/standovision.

About Standox

Standex, a global refinish coating brand from Axalta, is the best choice for professional refinishers.
