

The new Genius iQ spectrophotometer

A leap forward in perfect colour management - welcome to the future of spectrophotometers.

Redefining what's possible in colour matching.

Using cutting-edge technology and advanced design, the all new Genius iQ spectrophotometer sets new standards for colour matching. In combination with innovative Standwin iQ software and using a Wi-Fi connection, it gives you better results – faster and more conveniently than ever.

Characteristics

State of the art technology

The advanced technology of the Genius iQ² spectrophotometer is supremely fast and accurate. Along with [Standwin iQ software](#), it uses over 200,000 constantly updated formulas to give you precise colour matches every time. It even automatically shades the colour and measures finish effect so you get a complete formula in one go.

Wi-Fi connection

Using Wi-Fi, the Genius iQ instantly shares colour data to whoever needs it in your team – whether they're using a desktop, laptop, tablet or even smartphone. Workflows can be dramatically speeded-up in this way.

Innovative design

Much smaller and lighter than previous models, the Genius iQ is easy to use. Bright screens and clear icons make it incredibly intuitive and it takes hardly any training to get up and running. Colour coded LEDs also give instant feedback on the device's status so you are always in complete control.

Small & easy handling

The Genius iQ is significantly smaller than other colour devices so it can easily be operated even with one hand.

Special features

Colour & effect measuring.

The Genius iQ is the only device which also measures the finish effect including pearlescence and sparkle to give a complete formula.

Hi-resolution rotating touch display.

The full-colour, hi-res screen, automatically flips 180 degrees which makes it handy for using in difficult to access areas. It has a pressure touch screen which means it can be used with or without gloves.

Wi-fi connection to Standwin iQ.

Use anywhere to optimise workflow. The Wi-Fi connection means you can transfer data to Standwin iQ software instantly.

Protective lens hood.

The Genius iQ features a magnetic dust plate to protect the sensor area lens, and also allows the protective cover to be placed on metal surfaces so it won't get lost.

Docking station cradle.

The charging cradle/docking station keeps the colour device charged and stored tidily and ensures the rechargeable batteries are always ready to use.

Stylus included.

It also comes with a stylus which the user can use if preferred.
