

Standoblu Basecoat

Right first time colour. It's in our DNA.

Colour competence, technological know-how and the need to meet the highest standards are all part of our DNA.

The spectrum of colours and effects used in the automotive world gets broader every day. High chroma colours, subtle paint effects and tinted clearcoats are just a few of the paint challenges bodyshops now face in their efforts to make perfect colour matches.

To keep pace with all this change, we are constantly expanding the Standoblu basecoat system with the new formulations you need to satisfy your customers.

Tomorrow's paint technology today.

Thanks to state-of-the-art pigment technology and outstanding flow properties, Standoblu provides excellent mottling control as well as optimum hiding. Good blending characteristics enable smooth transitions for invisible car paint repairs – whatever the finish.

Standoblu Basecoat is one part of a comprehensive coating system, from fillers to clearcoats, providing your business and your paint technicians with all the components needed for today's most demanding automotive finishes.

Its innovative properties combine numerous benefits which are important in day-to-day work, such as:

- Excellent colour accuracy thanks to specially selected effect flakes and pigments
- Tens of thousands of mixable colours and variants including pearls, metallics and xyrillics
- Flexible in application
- Fast application in a single spray process

Right first time colour.

It's in Standoblu Basecoat's DNA.
